

1. Log In Story

New User

1. The user will be prompted to create an account. They will be able to choose between two login methods:

a) Create a username and password

- The username must not exist in the database
 - The username is not unique. Error message: “That username is already taken”
- The password must be at least seven characters long, consist of one of more numbers, and be written twice identically
 - The password is not at least seven characters or does not consist of one or more numbers. Error message: “Passwords must contain at least seven characters and one or more numbers.”
 - The passwords are not identical. Error message: “Passwords do not match.”

b) Gmail as the third-party authentication

- The user will sign in with their Gmail information. They will be sent a confirmation email.
 - Login Failed: Error message “Sign-up through Google unsuccessful.”

2. Once the user successfully created an account, they will be brought to “User Login Story”

Returning User

1. The user will login with their information.

- a. The user enters a username and password combination not recognized by the database. Error message: “Username or Password may be incorrect.”
- b. The user unsuccessfully tries to login through gmail. Error message: “An account may not be associated with that email” or an alternate message saying “Username and Password do not match.”

2. If they successfully log in, they will be brought into “User Login In Story.”
